CONVERGE POWERCLOUD

CONVERGE ENTERPRISE CLOUD

Disaster Recovery & High Availability

Highlights
- Protection and high availability services for critical business applications
- Tape-based or failover replication options
- Completely testable solutions
- Augment retiring support staff

Converge Enterprise Cloud Services provides organizations with the ability to enable full business continuity with data recovery and replication services, including:

- Live hosts on our floor and available for disaster recovery and testing
- Migration strategies for moving workloads to the power platform.
- Replication of production data to Recovery Center's IBM infrastructure
- VTL Replication

High Availability Solutions

When seconds count and minutes matter, Converge Enterprise Cloud Services provides solutions that deliver real-time recovery. Using virtualization and consolidation technologies.

System of checks and balances is in place to ensure the replicated data is always in sync with production data.

Converge Enterprise Cloud - IBM Power

IBM iSeries (AS400, IBMi), pSeries (AIX), Linux on Power, and zSeries Solutions

Replicate off-site data without large capital and operational expense

Want assurance that your business applications are always up and running? Need a place to land your IBM data replication, recovery or testing environment?

Our services offer assistance to help you successfully:

- Conduct application upgrade testing
- Perform operating system upgrade testing
- Create migration strategies for moving workloads

Utilize these services to your advantage and seamlessly satisfy your availability and capacity needs as your business grows.
