

MAINFRAME: DISASTER RECOVERY SERVICE

Converge Enterprise Cloud Services IBM Mainframe DRaaS provides customers the ability to recover and test workloads in our secured environment. DRaaS allows valuable mainframe applications to be recovered quickly and efficiently.

Benefits of Mainframe DRaaS:

- **Scalable** - Mainframe resources can be quickly adjusted to meet changes in IT as needed
- **Secure** - data is secured in our SOC 2 Type II facility
- **Dependable** - knowing that LPARs are always available
- **Recoverable** - resources for recovery and testing can be coupled with data replication options
- **Disaster Recovery Testing** - schedule anytime with 60 days notice
- **Cost Effective** - shift costs from CapEx to OpEx with Converge Enterprise Cloud Services flexible agreements to meet your changing requirements

The Converge Enterprise Cloud Disaster Recovery-as-a-Service Solution provides cost-effective data replication and recovery options, generating faster recovery times and superior data security.

Options

- Ability to network Converge Enterprise Cloud Services mid-range and x86 infrastructure for a complete Disaster Recovery solution
- High Availability solutions for DASD, VTL, and Gridded VTS
- Tape-based recovery solutions available with encryption and non-encryption capabilities
- Engineering Support across all platforms and networks

Highlights

- Protection for critical business applications at time of disaster or testing
- Flexible infrastructure to meet changing IT requirements
- DASD replication options to reduce RTOs
- Lower DR costs as compared to the big-box providers
- Get the engineering support you expect
