

## RECOVERY OPTIONS STUDY

### **Our Continuity Consulting Office provides six key services:**

- Impact and Risk Analysis
- Business Continuity Planning
- Crisis Management
- Recovery Options Study
- Disaster Recovery Planning
- Pandemic Planning

### **Customized Disaster Recovery Strategies**

Your organization's disaster recovery capability and recovery success is determined by the recovery strategies you implement. With our Recovery Options Study, your organization can leverage our expertise in designing recovery solutions, assessing potential recovery options and selecting the strategy that best fits your requirements. With a thorough understanding of recovery solutions, the Converge Enterprise Cloud team is able to work with you to determine a short list of acceptable and practical high-level strategy alternatives that meet your recovery objectives.

### **We explore the potential for the following recovery strategy components:**

1. A place to recover. Capabilities provided by the recovery locations considered can range from an internal high availability failover solution to a Quick-Ship strategy.
2. Applications recovery. Prioritization of applications recovery requirements is fundamental to an executable disaster recovery strategy.
3. Recovery equipment/hardware. Appropriate means for provisioning recovery equipment will be considered relative to your ability to recover.
4. Data protection, restoration and accessibility. Data protection and recovery solutions are evaluated for conformance with identified recovery windows and recommendations made to meet your requirements.
5. Network connectivity. Network issues are reviewed with the objective of selecting the best means for re-establishing network connectivity between the user community and your selected recovery location.
